Messenger is a mobile customer for the popular search engine and email provider. It's a good messaging app, fully featured a bit – but it feels deeply lacking in terms of users. At least within people I know brilliantly bygone Starting up Yahoo! Messenger, and entering my old Yahoo! login credentials, I wasid that my account had been locked. No doubt this is the result of five years of inactivity, but it still revealed that my dog was with the service during my time with the service - no I know it uses. Despite the fact that you can now chat to either MSN or Yahoo users with this messaging service, I only know a handful. After reactivation my account was greeted with some out-of-date spam, and... No. Everyone was offline. A previously vibrant community was now just a collection of empty chat windows. Usable but usable and, in fact, that's kind of embarrassing, because Yahoo Messenger has its own very good program. From within your menus easily scrolling, you can access any contacts you have and filter them in a different way useful. You can easily change your font, style and text size as well as add attachments – there's also the ability to take photos and video in the app. Being an app version of the online chat client, you can also chat to friends from your browser. Like the rest of the service, it works well, with messages delivered quickly (the presentation you entered on your device) – a fact I know because the only way I could find out to test the app was to create a second account to chat with myself. Just for Yahoo!So users, in fact everything is in place for people still in MSN and Yahoo communities to enjoy this – you can even prod your old contacts with SMS to log them in. But, I guess, if you're in this environment you probably know all of this now. Unfortunately, for me it's an empty bayer land. Remembering an old internet life that I don't need to revive because I've now found my own alternatives. It can also alert you to new emails on your Yahoo Mail or Yahoo personal account, or when you have future events recorded in the Yahoo calendar. Yahoo Messenger offers firewall support, standby mode that minimizes the program until an Internet connection is built, has the ability to store and print your conversations, and a tabbed interface that provides quick access to your favorite stocks, news, and sports scores. Other features include the ability to create a chat room automatically, stock price alerts, the ability to send messages to friends even if they are not online when you are, a quick compact mode that hides messenger tools to maximize your viewing area, Messenger theme, online presence, small HTML button you can put on your website to allow your Yahoo friends to instantly see if you are online , and voice chat, which allows you to speak for free to anyone else on the Internet. If you have microphones and speakers, you can talk to other people at Yahoo at no remote cost. With webcams, you can see who you're chatting with, or see the webcam of any Yahoo members that allowed you access. Yahoo Messenger, the pioneering messaging app that changed how users communicate over the Internet, is now officially dead. To remember, the California-based Yahoo Company announced last month that it would be killing Yahoo Messenger. Users can now no longer access in-app chats and the service will no longer work. While you can't log in to the app, even if it's downloaded on your device, there's a substance by the company to store you Yahoo has noted that users can save their chat history on their computer by the end of November, after which limited access will also be withered. As it had shown last month, Yahoo is pointing users toward its only invited group messaging app called Yahoo Squirrel. The app is currently in beta, and users can request an invitation. As we noted, while you can't access Yahoo Messenger, users can download chat history on their pc or personal device. To do this head to the site request the downloader and log in. Select a verification method, then enter the account key. Click Download, enter an email that you want to send the chat history file, click OK, check your email for the file and download it from there to your device. Even if you have the app installed on your phone, it won't be able to access or sign in to Yahoo Messenger. Yahoo recommends that users delete the app after saving users' chat history. To remember, Yahoo Messenger was launched by Stanford alumni Jerry Young and David Philo in 1998 and managed to run for 20 long years. The service was most used in its first years because it replaced emails and SMS messages. However with the advent of smartphones, Facebook and finally WhatsApp, Yahoo Messenger lost steam and users began switching. Other services that have succumbed to competition over the years include MSN Messenger, AOL, ICQ, and even Orkut. Yahoo's technology revolutionized the industry and helped begin in a new era of high-speed communications that changed the way millions of barrels of oil were traded daily. Oil traders, hedge fund managers, pipeline timing, refinery buyers brokers and even ship brokers have continued to use Yahoo Messenger globally for everyday business communications, even when each other stopped.
